SUMMARY

Computer Science and Engineering undergraduate majoring in Data Science, with hands-on experience training, tuning and benchmarking supervised machine learning models in Python and scikit-learn. Built an end-to-end used-laptop price prediction system comparing four regression algorithms on MAE, RMSE and R-squared, plus full-stack applications with React, Node.js and SQL. Seeking a machine learning internship contributing to model development, evaluation and data pipeline work.

EDUCATION

Bachelor of Science in Computer Science and Engineering — Major in Data Science

United International University (UIU), Dhaka, Bangladesh | 2024 – Expected 2028

- Awarded the UIU merit-based departmental scholarship (top 10% of the department) in every trimester since the first, covering 25% of tuition fees.
- Relevant coursework: Machine Learning and Artificial Intelligence, Data Mining and Data Science, Database Management Systems, Data Structures and Algorithms, Operating Systems.

TECHNICAL SKILLS

Languages: Python, C, C++, Java, JavaScript, TypeScript, SQL

Machine Learning & Data: scikit-learn, Keras, pandas, NumPy, Matplotlib, regression modelling, model evaluation (MAE / RMSE / R-squared)

Web Development: React, Next.js, Node.js, Express, REST APIs

Databases: MySQL, PostgreSQL, relational schema design

Tools: Git, GitHub, Microsoft Excel, Microsoft Word, Adobe Photoshop, Adobe Illustrator, Canva

Languages Spoken: Bangla (native), English (professional working proficiency)

PROJECTS

PricePoint — Used-Laptop Price Prediction System

Python, scikit-learn, pandas, NumPy, Matplotlib

- Built an end-to-end regression pipeline that estimates the resale value of a used laptop from brand, processor, RAM, storage, GPU, screen size, age and condition.
- Implemented and benchmarked four models — Linear Regression, Decision Tree, Random Forest and Support Vector Regression — comparing them on MAE, RMSE and R-squared to select the best performer.
- Compiled a custom dataset from local marketplace listings to represent the Bangladesh used-laptop market, which public datasets do not cover.

RouteGPT — AI Assistant for Public Transport Routes & Fares

Python, NLP, MySQL

- Developed a conversational assistant that answers natural-language questions about Dhaka transport routes and fares, removing the need to read raw route tables.
- Handles multi-leg journeys where no direct bus exists by identifying transfer points, and estimates short-distance rickshaw fares as an alternative.
- Designed the underlying relational database of routes, stops, fares and discount categories.

MicroTeach — Peer Micro-Teaching Marketplace

React, Node.js, Express, MySQL

- Designed and built a web platform where a student posts a specific topic they are stuck on and a qualified peer teaches it for an agreed fee, solving the problem of finding topic-specific help inside a small campus network.
- Modelled the full relational schema (combined student/teacher profiles, posts, applications, reviews, reports, messaging) and implemented the admin panel and review system.
- Built a real-time 1:1 messaging subsystem with photo and video sharing.

LEADERSHIP & EXPERIENCE

Executive, IT Wing — UIU Data Science Club

United International University, Dhaka | Present

- Serve as web developer and designer for the IT wing's digital properties.
- Manage online and offline sessions for the wing, handling end-to-end coordination and logistics.
- Manage a team of 25+ wing members each trimester.

Peer Tutor — Programming & Algorithms

United International University, Dhaka | Present

- Teach junior students and peers data structures, algorithms and database concepts, building worked examples and step-by-step walkthroughs that make abstract topics concrete.
